

NOTE: The President's remarks were recorded at approximately 5 p.m. on February 11 in the Oval Office at the White House for later broadcast, and the transcript was released by the Office of the Press Secretary on February 14. These remarks were also made available on the White House Press Office Radio Actuality Line.

Statement on the Bombing of a School in Sudan

February 14, 2000

I am deeply concerned by reports that the Government of Sudan bombed a school in the Nuba Mountain region on February 8, killing and wounding many young children. It is an outrage that such egregious abuses against innocent Sudanese citizens have become commonplace in the ongoing civil war in Sudan, which has claimed over 2 million lives.

The United States calls on the Government of Sudan to cease all aerial bombardment and to refrain from any attacks on civilian targets. We also call for full and immediate access for humanitarian organizations seeking to provide relief to war-ravaged civilians in Sudan.

Remarks Prior to a Meeting With Technology Industry Leaders and Computer Security Experts and an Exchange With Reporters

February 15, 2000

Internet Security

The President. The room is smaller than it looks on television. [*Laughter*] Usually I don't get so many of them coming in, except you guys are—[*laughter*].

Well, first of all, I want to welcome the leaders of the high-tech industry and experts on computer security to this meeting at the White House to talk about how to maximize the promise and minimize the risks to the Internet.

The disruptions at several websites last week highlight how important the Internet has become to our whole way of life in America and how vulnerabilities at one place on the net can create risks for all. Our administration has been working for years now to

reduce vulnerabilities in Government computers and to encourage the private sector to do more.

We know that we have to keep cyberspace open and free. We have to make, at the same time, computer networks more secure and resilient, and we have to do more to protect privacy and civil liberties. And we're here to work together.

Last month I released a draft plan to help do our part to meet these challenges. And in the budget, I asked Congress for \$2 billion for cybersecurity to safeguard Government networks, to detect attacks, to hire and train more security experts, to increase cooperation with the private sector. I want to jump-start this effort by providing \$9 million right away to begin some of these key initiatives. And so we'll do what we can.

I understand that many leading industry members, including the companies represented here today, have agreed to create a mechanism to share cybersecurity information, and I applaud that. I am asking Secretary Daley and my Science Adviser, Dr. Neal Lane, and Richard Clarke from the White House, to work with these companies to accelerate our efforts with the private sector.

Now, having said that and before we open the floor for questions, I'd like to ask Peter Solvik, who is to my right, the senior vice president and chief information officer of Cisco Systems, to say a few words on behalf of the private sector people who are here today.

Peter.

[*At this point, Mr. Solvik made brief remarks.*]

The President. Thank you.

Q. Mr. President, is there such a thing as a plan to actually secure the Internet?

The President. Secretary Daley says there is. [*Laughter*] Let me say, what we're going to try to do today is to talk about what the Government's responsibility is for our own systems and networks, what the private sector's responsibility is, and as I said before, how to talk about having adequate security, how to protect privacy and civil liberties, but also how to keep the Internet open.
